

St. Augustine Lawn Care Made Easy!

step #1

HiYield® Turf & Ornamental Weed & Grass Stopper Containing Dimension may be applied in winter & again in spring for the prevention of many common lawn weeds. It will also stop crabgrass from germinating & destroys the weed during the first five weeks of its growth.

It will also stop crabgrass from germinating & destroys the weed during the first five weeks of its growth.

step #2

St. Augustine Weed & Feed Should be applied early in the spring when the grass begins to

turn green & the weeds are actively growing. This product prevents listed weeds from coming up while also killing many existing weeds. For more thorough weed control spray with **ferti-lome® Weed-Free Zone 10-14 days later.**

step #3

Lawn Food with Iron Apply in

June. This product will noticeably increase green Chlorophyll Pigment in a lawn almost “overnight” & keep it “green” long term. This lawn food contains Chelated Iron which is rapidly available to the turf. For best results apply monthly in the summer, weather permitting.

step #4

Winterizer for Established Lawns

Apply in the fall to both lawns & shrubs. It enables turf, trees & shrubs to withstand the rigors of winter better and easier. Its effects are similar to putting on an overcoat in the winter. **Extra potash enables warm season grasses over winter better and be healthier in the spring.** For additional weed control apply **ferti-lome® Winterizer & Weed Preventer II For Southern Grasses w/ Dimension.**

step #5

Apply **ferti-lome® F-Stop For Picture Perfect Disease Free Turfgrass**. In severe cases, repeated applications may be necessary. It is advisable to apply a preventive application of **ferti-lome® F-Stop** in the spring & fall. Specific types of crawling insects (such as ants, crickets, grasshoppers etc.) may be controlled by monthly applications of **Hi-Yield® Bug Blaster II Turf Insect Control Granules**.
